

## **Project Guidelines for Class XII Psychology**

### **Project 2 - Attitudes**

The student is expected to complete the Attitude project and submit the report by the **8<sup>th</sup> July 2026**, failing which the internal marks in the yearly exams will be impacted.

#### **Note:**

1. Projects can be typed.
2. This will be put through plagiarism review.
3. Formatting – Font to be used is Times New Roman (12)
4. Page numbers to be mentioned.
5. Cover Page – based on your creativity along with your name and class.
6. Index to be included mentioning the contents and page numbers.
7. All the Graphs to be labeled along with the key.
8. Bibliography to be attached at the end on a fresh page according to APA format.

#### **The project should cover the following: -**

##### **1. AIM**

To study attitudinal differences between generations / gender - regarding **Fashion or Work/Lifestyle or Marriage**. (Any one of the above)

Or

**Gender differences** (boys and girls) of the same age - group (preferably from Class XI or XII).

##### **2. HYPOTHESIS** (to be formed by the student according to the selected topic)

##### **3. Identify the Independent and Dependent Variable** of the study

#### **Example 1**

*Hypothesis* - The younger generation is more brand conscious than the older generation and their buying behavior is more influenced by it.

In the above hypothesis all statements which say that branding is good become positively worded statements and vice versa.

Positive statement – *I wear only branded clothes as the non-brand clothes lack style and finesse.*

Negative statement – *I want to get value for my money hence I don't bother about brands.*

**(Statements will be sent to the teacher by 4<sup>th</sup> June in order to start with the data collection)**

## Example 2

*Hypothesis* - The older generation is less open to the idea of pre-marital sex than the younger generation and may look down upon people who indulge in them.

In the above hypothesis all statements that say pre-marital sex is bad become positively worded statements towards this hypothesis and vice versa.

**(This is the part is critical as the scoring will get affected, if done incorrectly)**

## 4. INTRODUCTION (Please keep in tandem with the syllabus)

What are attitudes?

Components of attitudes (Diagram to be drawn)

How are attitudes formed?

How can attitudes be changed?

What is Prejudice?

The origins of prejudice

Ways to reduce prejudice

**(Relevant pictures to be stuck)**

**Tools:** to construct a simple 5-point scale (10-15 items) with positively and negatively worded statements.

**Raw Data:** Summated scores on all the statements for each respondent.

**Analysis:**

- i) Calculate mean attitudinal scores for each group and make inter-group comparisons.
- ii) Short, structured interview schedule constructed and administered to 8-10 students in each group. The responses elicited can be used to draw inferences to explain the inter-group differences, if any.

## 5. METHODOLOGY / TOOLS

### **Questionnaire**

**This questionnaire and the structured interview questions are to be mailed to the teacher by 4<sup>th</sup> June after forming the hypothesis and a brief discussion with the teacher.**

A simple 5-point Likert scale to be constructed with a total of 16 items. There should be 8 positively and 8 negatively worded statements in all. This questionnaire to be administered on two generations. *(There should be a gap of at-least 20 years between them. So, the younger generation is from 18 -25 years and the older generation is from 45 – 65 years).*

### **Structured interview**

There is a structured interview style questions to be formed which has 3 to 5 questions in which we look at the selected topic/aspect in more detail. These need to be given to at-least three of the selected sample from each generation. (It can be given to up to 5 participants from each group)

### **Sample size**

The questionnaire is to be conducted on 20 people. 10 from the older generation and 10 from the younger generation.

### **Groups:**

Two generations (parents and children)

**Or**

Gender differences (boys and girls) of the same age group (preferably from Class XI or XII).

## 6. ANALYSIS

**Raw Data:** Summated scores on all the statements for each respondent.

(Two tables showing these entries to be made)

### **Scoring method**

Marks are between 1 and 5.

All positively worded statements to get 5 for strongly agree, 4 for agree, 3 for neutral (cant say), 2 for disagree and 1 for strongly disagree

For all negatively worded statements, it's the opposite -5 for strongly disagree, 4 for disagree, 3 for can't say, 2 for agree and 1 for strongly agree.

Calculate mean attitudinal scores for each group and make inter-group comparisons.

### **Graphs**

Three graphs to be made

One showing the individual score for the first generation/group (**question wise**), second showing the individual score for the second generation/group (**question wise**) and the third showing the 2 **means** for each generation / group.

### **Inferences and Analysis:**

The three highest differences in score between the two groups found through the survey questions to be taken and reasons for the differences to be explained. Then three lowest scoring differences in score between the two groups found through the survey questions to be taken and reasons for the differences to be explained as part of analysis.

Lastly, the responses of the short - structured interview schedule constructed and administered to 3-5 participants in each group to be used to draw inferences to explain the inter-group differences, if any. This is to be written as a paragraph where the comparison between the responses of the older generation and the younger generation have to be made collectively as a group (not as individual responses)

## 7. CONCLUSION

This is directly in tandem with the hypothesis formed. So only a couple of lines saying – Example -

The younger generation is more influenced by branding and tend to buy branded products more than non-branded ones as compared to the older generation who seem to look more for comfort.

## 8. BIBLIOGRAPHY

This needs to be written in APA style.

alphabetical order, with the date and time of reference given, if using online resources.

### **Marks allocation for the project (Half Yearly Exam)**

Basic Concepts - 2 marks

Methodology - 4 marks

Result and Discussion - 4 marks

Bibliography (APA format to be used) - 3 marks

Overall Presentation 2 marks

**TOTAL - 15 marks**
